root@javier:~# cat profile.txt

Cybersecurity and software development professional specialized in penetration testing, vulnerability analysis and web security testing. Hands-on experience performing security testing on SaaS platforms including attack surface analysis, API enumeration, authentication testing and vulnerability assessment following OWASP methodologies. Currently developing the Android application **Fitt4Sences** using Kotlin, Jetpack Compose and Supabase backend while building cybersecurity laboratory environments such as **Nem3Sys** focused on network segmentation, IDS monitoring, vulnerability scanning and system hardening. Strong technical background in infrastructure environments and incident resolution with analytical capabilities applicable to SOC, pentesting and DevSecOps environments.

root@javier:~# ls technical_skills/

Cybersecurity

- Penetration Testing
- Vulnerability Assessment
- Attack Surface Analysis
- OWASP Top 10
- Security Auditing
- Authentication Testing
- API Security Testing
- Blue Team Monitoring
- Threat Detection
- Log Analysis

Development

- Kotlin
- Java
- Python
- Android Development
- Jetpack Compose
- Mobile Development
- REST APIs
- Supabase
- PostgreSQL
- JWT Authentication

Systems & Networking

- Linux
- Kali Linux
- Windows
- VMware
- TCP/IP
- Network Segmentation
- Firewall Configuration
- Traffic Analysis
- IDS Monitoring (Snort)
- Vulnerability Scanning

root@javier:~# ls security_tools/

Reconnaissance

- Nmap
- Amass
- Subfinder
- theHarvester

Web Security

- Burp Suite
- WPScan
- OWASP ZAP
- Nikto

Password Attacks

- Hydra
- John the Ripper
- Hashcat

Vulnerability Scanning

- Nessus
- OpenVAS

Offensive Security

- Metasploit Framework
- SQLMap

Monitoring / IDS

- Snort

root@javier:~# cat security_labs.log

Nem3Sys – Blue Team Cybersecurity Lab

Designed and implemented a personal cybersecurity laboratory focused on network defense and monitoring. Key implementations:

- Network segmentation using virtualized environments
- Firewall configuration and testing
- Deployment of Snort IDS monitoring
- Vulnerability scanning using Nessus and OpenVAS
- Traffic monitoring and threat detection
- ICMP scan detection rules
- TCP SYN scan detection
- SSH brute force detection
- DoS attack pattern detection
- Security testing scenarios for blue team practice

SaaS Security Audit – AI Shop Helper

Security assessment of a SaaS platform focusing on web application and API security. Activities included:

- Attack surface enumeration
- API endpoint discovery
- Authentication testing
- Brute force simulation on login endpoints
- JWT token analysis
- Vulnerability documentation

Produced a full technical security audit report including risk analysis and mitigation recommendations.

root@javier:~# ls projects/

Fitt4Sences – Android Mobile Application

Mobile application focused on habit tracking and health monitoring. Technologies: Kotlin · Jetpack Compose · Supabase · PostgreSQL Key features:

- User authentication and profile management
- Activity tracking and progress monitoring
- Habit tracking engine
- Nutrition tracking module
- Hydration monitoring
- Data visualization and progress analytics
- Cloud synchronization using Supabase
- Secure backend integration

Nem3Sys – Cybersecurity Lab

Personal cybersecurity laboratory environment designed for penetration testing practice and network security experimentation.

- Kali Linux attacker environment
- Segmented internal network
- Intrusion Detection System monitoring (Snort)
- Vulnerability scanning using OpenVAS
- Firewall configuration and testing
- Attack simulation scenarios

MisDiabluras – Ecommerce Platform

Ecommerce platform integrating automation, security configuration and customized workflows.

- Custom ecommerce architecture
- Product automation workflows
- Payment gateway integrations
- SEO optimization and structured data
- Security configuration and hardening
- Automation processes using n8n

SaaS Security Pentest

Security assessment and penetration testing of SaaS platforms focused on authentication systems, API exposure and attack surface analysis.

- Reconnaissance and attack surface mapping
- Authentication security testing
- API security testing
- Vulnerability scanning and exploitation
- Technical reporting and remediation recommendations

WordPress Development

Development and configuration of professional websites using WordPress and WooCommerce.

- WordPress installation and configuration
- WooCommerce ecommerce setup
- Plugin and theme management
- Security configuration and hardening
- Performance optimization
- SEO and structured data implementation

Web Security Audits – Kit Digital

Technical security and optimization audits of websites requesting the European Kit Digital grant.

- Technical SEO audits and optimization
- Structured data and schema implementation
- Image optimization and lazy loading
- Page speed and mobile performance improvements
- Search engine indexing configuration
- Technical reporting and remediation recommendations

root@javier:~# history --experience

- **Cybersecurity Reviewer – Multiplicalia**
- Security review of websites applying for the European Kit Digital program
- Identification of security vulnerabilities and configuration issues
- Technical reporting and mitigation recommendations

- **Technical Infrastructure Specialist**
- Troubleshooting technical incidents
- Maintenance of electrical and mechanical infrastructure
- Supervision of maintenance operations
- Resolution of operational incidents under pressure

root@javier:~# cat education.log

- Multiplatform Application Development (DAM) – Currently in progress
- Intermediate Vocational Training – Automotive Bodywork

root@javier:~# cat certifications.txt

- Cisco Networking Academy – Networking Basics Certification
- Cisco Networking Academy – Junior Cybersecurity Analyst Career Path
- Centro Criptológico Nacional – Cybersecurity Incident Management
- Honeypots and Deception Systems Specialist
- Blockchain: Application and Management Certification
- Big Data Architecture Certification – Hadoop, Spark, Kafka, NoSQL

root@javier:~# cat languages.log

- Spanish – Native
- English – Technical
